**JPX** is a powerful water-soluble product designed to be used in column, desalter, exchanger, reboiler and vessel clean up. It is good for general maintenance and turnaround applications in oil refineries. It can also be used in still and agitated cold vat applications. **JPX** has been formulated to handle the toughest-to-clean industrial plants with superior price and performance, while complying with the highest air and water quality standards. This biodegradable cleaner is compatible with stringent effluent system requirements and leaves less dissolved oil in water than more expensive competitive products.

## *Application information;*

**JPX** is introduced into the vessel for the purpose of reducing the time required to perform the steam purge. The **JPX** will reduce the time required to reach acceptable Benzene, Hydrogen Sulfide, and LEL levels. **JPX** will remove the hydrocarbon contamination from the vessel internals to allow for entry and subsequent tunneling, inspection, and hot work. The use of **JPX** has resulted in time savings from 1 to 2 days in decontamination time.

## *Application Guidance*

Our technical support people will work directly with your plant personnel to assess the chemical volumes required and the sequence and time of the application. We can insure that we can achieve maximum time savings at the minimum cost to you, our customer.

Please email us at [info@jayneproducts.com](mailto:info@jayneproducts.com) with any questions. We will be happy to provide you with further information and show you why **JPX** is the decontamination product of choice.

A partial list of **JPX** customers includes Chevron, Equilon, BP/Arco, Mobil Oil, Shell Oil, Phillips, Royal Dutch Shell, and Onyx.
